# CLOUD HOSTING KEEPS YOUR BUSINESS SOARING

**CoreVault™**
Secure Cloud Solutions for your Business

## Security, flexibility, and built-in backup and data protection

Cloud hosting can save you money and headaches. Take your current or future server infrastructure (physical or virtual) and host it with CoreVault in the Cloud. Instead of using local servers and hardware to host your data and applications, CoreVault will offer dedicated physical or virtual servers to you from our data center. This offers numerous advantages:

**MINIMIZE RISK.** Most data loss and system downtime are due to local problems, ranging from human error to errant weather. Off-site hosting insulates you against these problems.

**MAXIMIZE SECURITY.** You may be surprised to discover our data centers may be more secure and better protected than your local facilities.

**99.999% UPTIME.** You might also be startled to find we can offer greater uptime than your on-site facilities can.

**BUILT-IN BACKUP.** Thanks to our dual, geographically separate facilities, we can add an additional layer of redundancy, plus failover and replication capabilities.

**COST SAVINGS.** Cloud hosting enables instant scalability with ZERO capital cost.

**FLEXIBILITY.** With Cloud hosting, you and your team can access your applications and data from anywhere, anytime.

Our product offerings have a variety of options guaranteed to meet your organization's most stringent needs. We provide Single or Dedicated virtual machine offerings that have a low monthly fee and setup charge. The following elements are essential and easily scalable within our offerings:

- Processor speed
- Memory
- SAN Storage
- Backup Storage
- Data Transfer

*All packages include an enterprise level OS of choice, Firewall, Daily block level backup, OS Patching, and Monitoring. Upgrades are available at a low additional cost.
